Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims to the application:

Listing of Claims:

1. (currently amended) A method, comprising:

(a) providing a web client computer connected to a network, where the client includes an application programmatic interface (API);

(b) receiving, at the client, web content from a remote web server connected to the network, where the web content enables the client, in response to user input, to select images and to create a composite image from the selected images;

(c) issuing, by the web content, a device independent call to the API;

(d) responding to the call;

wherein steps (b), (c) and (d) are performed while a user is logged into the client;

wherein the responding step is performed by adding the composite image to [[the]] a ~~user's personal~~ collection of job images assigned to the user.

2. (original) The method of claim 1, wherein the web content enables the web client computer to display a first graphical user interface for enabling a user of the client computer to provide the user input.

3. (previously presented) The method of claim 2, further comprising:

receiving the user input at the client computer;

responding to the user input at the client computer by creating the composite image.

5. (canceled)

6. (canceled)

7. (canceled)

8. (canceled)

9. (previously presented) A computing system, comprising:

(a) a web client computer having access to a plurality of electronic images;

(b) a first web server computer connected to the client over a network;

wherein the first web server computer with the capability to provide first web content to the client;

wherein the first web content enables the client to, in response to first user input, create a composite image that includes images selected from the plurality of electronic images;

wherein the first web content issues a device independent call to an API of the client in order to add the composite image to a collection of images; and

wherein the collection of images are personal job images of an active user of the client.

10. (original) The computing system of claim 9, wherein the first web content enables the web client computer to display a graphical user interface for enabling a user of the web client computer to provide the first user input.

11. (canceled)

12. (original) The computer system of claim 9, wherein the first web content enables the web client to display at least one web page that provides a graphical user interface for enabling a user of the web client computer to provide the first user input in order to create the composite image.

13. (original) The computer system of claim 9, wherein the network is the public Internet.

14. (original) The computer system of claim 9, wherein the first web server provides the first web content to the web client computer by transmitting the first web content to the web client computer over the network using an http protocol.

15. (previously presented) A Web server computer, comprising:

(a) an interface for receiving a request from a web client over a network;

(b) a mechanism for responding to the request by transmitting web content, over the network, to the web client;

wherein the web client computer has access to a plurality of electronic images;

wherein the web content enables the web client to, in response to first user input, select images from the plurality of electronic images;

wherein the web content enables the web client computer to, in response to second user input, create a composite image from the selected images; and

wherein the web content issues a device independent call to an API of the client computer in order to add the composite image to a collection of images each classified as a personal job image of an active user of the client computer.

16. (original) The web server computer of claim 15, wherein the web content causes the web client computer to display a user interface that enables a user of the web client computer to provide the first and the second user input.

17. (original) The Web server computer of claim 15, wherein the request is addressed to a URL assigned to the web content.

18. (previously presented) A computing device, comprising:

(a) means for receiving a request from a web client computer over a network, the request address to a pre-determined URL; and

(b) means for responding to the request by transmitting a program of instructions to the web client computer; and

wherein the program of instructions enables the web client computer to select electronic images and to create a composite image from the selected images;

wherein the program of instructions issues a device independent call to an API of the client computer in order to add the composite image to a collection of images, where the collection of images are job images of a present active user of the client computer.

19. (original) The computing device of claim 18, wherein the program of instructions is web content.

20. (original) The computing device of claim 18, wherein the network is the Public Internet.

21. (currently amended) A computer readable medium embodying first Web content for causing a Web client computer to perform method steps, the method steps comprising:

creating a composite image based upon ~~the first and second~~ user input; ~~and~~

displaying at least one web page that includes a graphical user interface for enabling the user to provide the ~~first and the second~~ user input; and

configuring the Web client computer so that when the client computer is running second Web content and a particular user is logged into the client computer, the second Web content can access the composite image by issuing a pre-determined application program interface (API) call; and

wherein the API call is device independent.

22. (original) The computer readable medium of claim 21, wherein the at least one web page includes a plurality of thumbnail images each corresponding to a unique one of the plurality of electronic images.
